

1. Explain the principles behind sustainable development and provide examples of successful sustainable projects. How can these principles be applied on a global scale?
2. Investigate the causes and effects of climate change on different ecosystems. How can mitigation and adaptation strategies be implemented to address these issues?
3. Assess the challenges of water scarcity in various regions. What are the potential solutions for ensuring access to clean and sustainable water sources?
4. Explore the relationship between biodiversity and ecosystem services. How can conservation efforts contribute to maintaining essential ecological functions?
5. Evaluate the effectiveness of different renewable energy sources in reducing carbon emissions. What policies and initiatives can promote the transition to a more sustainable energy future?
