

1. Discuss the impact of deforestation on biodiversity and propose measures to mitigate its consequences.
2. Analyze the role of renewable energy sources in reducing carbon emissions. Provide examples of successful renewable energy projects.
3. Compare and contrast the advantages and disadvantages of organic farming versus conventional farming methods.
4. Examine the effects of climate change on global water resources. Suggest strategies for water conservation in the face of changing environmental conditions.
5. Evaluate the importance of urban planning in creating sustainable cities. Provide examples of cities that have successfully implemented eco-friendly urban development.
6. Discuss the ethical considerations surrounding wildlife conservation efforts. How can society strike a balance between human needs and the preservation of endangered species?
7. Explore the concept of "green architecture" and its potential impact on sustainable living. Provide examples of environmentally friendly architectural designs.
8. Investigate the role of government policies in promoting environmental sustainability. Assess the effectiveness of current policies in addressing environmental challenges
