

1. Define and discuss the concept of sustainable development. How can communities and industries work together to promote sustainable practices?
2. Explore the causes and consequences of climate change. How do changes in temperature and precipitation patterns impact ecosystems and human societies?
3. Analyze the importance of water conservation in both rural and urban settings. Discuss the challenges faced by communities in maintaining sustainable water resources.
4. Examine the role of biodiversity in supporting healthy ecosystems. How can human activities both positively and negatively affect biodiversity?
5. Discuss the concept of ecological footprint. How can individuals and businesses reduce their ecological footprint, and why is this important for the environment?
