

1. Define and discuss the principles of sustainable development. How can industries play a role in achieving sustainability?
2. Explore the causes and effects of climate change on ecosystems. Propose strategies for both mitigation and adaptation to climate change.
3. Investigate the importance of water conservation in both urban and rural settings. Highlight challenges and suggest sustainable water management solutions.
4. Analyze the concept of ecological footprint and its implications. How can individuals and communities reduce their ecological footprint for a more sustainable future?
5. Examine the role of renewable energy sources in the context of reducing reliance on fossil fuels. Discuss the advantages and challenges associated with the widespread adoption of renewable energy.
